1.0 Overview

1.1 Background

Childhood obesity and poor nutrition habits remain growing concerns in Australia, with one in four children aged 1 to 18 not meeting the national physical activity guidelines and increasing rates of unhealthy snacking habits among youth. Parents often struggle to encourage better food choices due to time constraints, socio-economic barriers, and the increasing influence of digital media. Our project aims to bridge this gap by providing an engaging and educational platform that empowers both children and parents to build sustainable healthy habits through digital tools.

1.2 Product

The Healthy Kids platform is a web-based solution that helps families adopt healthier lifestyle habits through simple, educational, and interactive tools. Across three iterations, the platform has progressively introduced the following features:

- **Local Resource Finder (Iteration 1):** Enables parents to search for nearby public parks and spaces based on location, encouraging outdoor activity and physical exercise.
- **Age-Based Activity Guidelines (Iteration 1):** Provides a visual guide showing recommended daily physical activity levels by age group. Clickable age groups reveal sedentary time, screen time, sleep requirements and Australian government guidelines to help parents understand their child's fitness needs.
- **Nutrition Planner (Iteration 2):** Offers parents a tool to view balanced meal plans tailored to children's age and dietary needs, powered by open-source nutrition datasets.
- **Visual Health Insights for Parents (Iteration 2):** Interactive visualizations showing national trends in physical activity and childhood obesity, helping parents make informed decisions based on evidence.
- **Reverse Recipe Finder (Iteration 3):** Allows users to upload an image of a dish. An AI model predicts the ingredients and offers cooking instructions based on recipe matches, helping parents recreate healthier meals at home.
- **Snack Swap Game (Iteration 3):** A child-friendly game presenting three snack options per round, where children select the healthiest one. Fun feedback and repetition help build an intuitive understanding of better snack choices.

Together, these features aim to support healthy habit formation, encourage food curiosity, and simplify nutritional learning for both children and their parents.

2.0 Ethics Canvas

Our Ethics Canvas identifies and mitigates potential ethical concerns while aligning with the **ACS Code of Conduct**:

Our project aligns with the **ACS Code of Professional Conduct** (Graham et al., 2014) , by upholding ethical and professional values in the design, development, and delivery of the Healthy Kids Platform. Consistent with the principle of **Primacy of the Public Interest**, the platform prioritises the well-being of children and families by promoting healthy eating and active lifestyles, no personally identifiable data is stored which upholds data privacy. It supports the **Enhancement of Quality of Life** by offering engaging and educational features that empower users to make informed health decisions. Our commitment to **Honesty** is reflected in the transparency of system outputs and clear disclaimers that explain the intent and limitations of AI-based features. We demonstrate **Competence** by using validated datasets and best practices in usability and data ethics. Our iterative development and responsiveness to feedback embody the value of **Professional Development**, while inclusive design practices and awareness of cultural diversity reflect our dedication to **Professionalism**. These principles are embedded in both our ethical framework and our product decisions.

A full [Ethics Canvas](#) can be found in our Project Governance folder.

3.0 Maintenance

Please refer to the [Support document](#) for detailed guidelines on server setup, security maintenance and employed dataset. You may also refer to the [Maintenance document](#) for the testing plan and procedure.

4.0 Future Sponsor

The Healthy Kids Platform has strong potential for long-term impact in public health and education, making it an ideal candidate for future sponsorship from government agencies, health organisations, and educational bodies.

Potential future sponsors include:

- **Australian Government – Department of Health and Aged Care:** Could use the platform as part of national childhood obesity prevention initiatives or community health outreach programs.
- **Nutrition Australia:** Could support the validation and expansion of nutrition content, ensuring accuracy in meal planning and snack comparisons.
- **Local Councils or Health Promotion Foundations:** Could co-brand and deploy the platform across schools, libraries, and community centres as part of regional health

strategies.

- **Australian Digital Health Agency (ADHA):** Could explore integrations with personal health records or public health dashboards to strengthen digital health literacy among families.

Sponsorship would allow for increased reach, culturally tailored modules, and wider implementation in schools and health campaigns. The Healthy Kids Platform is ready to grow into a national tool for family-centred health education.

5.0 Team Information

Our multidisciplinary team includes:

- **Ryan Jowono** (Business Analyst)
Email: rjow0001@student.monash.edu
Linkedin: www.linkedin.com/in/ryan-jowono-258b93366
- **Yuhan Zhou** (Developer)
Email: yzho0250@student.monash.edu
Linkedin: <https://www.linkedin.com/in/yuhan-zhou-117201301/>
- **Subbulakshmi Natarajan** (Data Scientist)
Email: snat0021@student.monash.edu
Linkedin: <https://www.linkedin.com/in/subbulakshmi-natarajan/>
- **Sherin John John** (Data Scientist)
Email: s0017@student.monash.edu
Linkedin: <https://www.linkedin.com/in/sherin-john-935a4b169/>
- **Bin Liang** (AI Specialist)
Email: blia0006@student.monash.edu
Linkedin: www.linkedin.com/in/jacob-liang-blia0006
